

Sprint 2 Planning

Product Owner - Guochen Shen

Production Deployment - Jacob

- Users can access a deployed application at geosnapr.com, running on a production server/database (3 hours)
- The deployed application will use a CDN to manage and serve static files and media (2 hours)
- The deployed application will be secured with an SSL certificate (2 hours)

Image Upload Features - Jacob

- Users can authenticate GeoSnapr with Facebook/Instagram to allow access to user photos (2 hours)
- Users can extract photos from Facebook/Instagram and upload them to GeoSnapr (4 hours)

Image Management Features - Guochen

- Users can edit photo captions and locations after the initial upload (1 hours)
- Users can create albums, edit album information, and move photos into albums, and browse the map based on albums (3 hours)

Map Manipulation - Guochen

- Users can traverse the map and zoom in/out, with markers collapsing at larger zooms based on location proximity, and markers expanding at closer zooms (3 hours)
- Users can select albums shown by the marker thumbnails and see an expanded view (1 hour)
- Users can select individual photos for an expanded view, with information editing capabilities (1 hour)
